professional summary

Full-stack engineer with 4+ years shipping scalable web applications from concept to production. Deep expertise in React, Node.js, TypeScript, and Python—with hands-on experience building AI-enabled features and workflow automations. Thrives in async-first, distributed teams where impact matters more than busyness. Currently experimenting with AI agents and LLM workflows to accelerate product development.

core competencies

full-stack development: React, JavaScript, TypeScript, Node.js, Next.js, Express.js, HTML/CSS, REST APIs, PostgreSQL, MySQL

ai & rapid prototyping: AI Agents, Python, LLMs, Workflow Automation, Machine Learning Pipelines, Data Analytics

infrastructure & devops: AWS, Docker, CI/CD Pipelines, Infrastructure-as-Code, Git, Linux, MongoDB

collaboration & leadership: Team Leadership, Mentorship, Async Communication, Cross-functional Collaboration, Agile

professional experience

Create Club

Toronto, ON

Co-Founder & Product Engineer, ARK Experiences

March 2025 – Present

Founder & Product Developer

August 2024 – Present

- Architected and shipped full-stack event management platform using React/Next.js frontend and Node.js/PostgreSQL backend—reducing operational overhead by 80% and improving customer satisfaction from 4.0 to 4.8/5.0 stars
- Shipped 10+ full-stack web applications for startups across Toronto and Silicon Valley—building from concept to production using React, Next.js, Node.js, and PostgreSQL
- Reduced client operational time by up to 80% through integration with external APIs and workflow automation—demonstrating bias for action and focus on impact over output

Pinhou Inc.

Toronto, ON

Product Lead

January 2024 – February 2025

- Led and mentored team of 12 developers building advanced React application—elevating team performance through candid feedback, code reviews, and collaborative problem-solving
- Built AWS deployment pipeline using Docker and infrastructure-as-code—ensuring scalable, reliable deployments while reducing deployment time from 2 hours to 15 minutes
- Defined product roadmap balancing business impact, user experience, and technical quality—prioritizing high-value features while reducing tech debt through incremental refactoring

ARO Inc.

Toronto, ON

Lead Application Developer – Full Stack & Automation

January 2023 – December 2023

Application Developer

May 2022 – January 2023

- Developed full-stack automation solutions with Python backends and web frontends—reducing manual process time by 50% and improving cross-functional team productivity by 40%
- Built and deployed machine learning models for intelligent document processing—boosting report generation productivity by 200% through automated data extraction and structuring
- Participated in on-call rotations and incident response—contributing with urgency to operational issues while advocating for preventive measures that reduced recurring incidents by 20%

Duit.io

Mumbai, India (Remote)

Associate Software Engineer

September 2020 – August 2021

- Built FinTech data analytics platform on Google Cloud Platform using Python and SQL—reducing decision-making latency from 15 seconds to 5 seconds (67% improvement)
- Led team of 3 in remote-first environment—established async communication patterns that doubled team interaction frequency through strategic use of collaboration tools

education

Graduate Certificate in Artificial Intelligence (AI) Design & Implementation

2021–2022

*Durham College, Toronto***Bachelor's Degree in Mechanical (Nuclear) Engineering**

2016–2019

University of Manchester, UK
